

New check valve with redundant sealing

Klingenberg, August 2020. The new model CV check valve from WIKAL is designed for a wide range of applications in the process industry. Its sealing system with a self-centering piston reliably prevents backflow of liquid and gaseous media.

The reliability of the new instrumentation valve is mainly due to its redundant sealing, consisting of an O-ring and a metal cone. Its leak tightness has been tested in accordance with BS6755/ISO 5208 leakage rate A. The solid-machined, robust design of the model CV ensures high repeatability and a long service life, even in heavy-duty applications. The pressurized parts correspond to the safety factor of 4:1.

For the new check valve, WIKAL offers an application-specific assembly with a measuring instrument. Such an instrument hook-up is delivered ready-to-install and leak tested.
